

In the News: Virtual Shadow™ Route Following Technology

FOR IMMEDIATE RELEASE

Virtual Technologies, Ltd. announces the Virtual Shadow™ Route Following technology.

Spokane, WA – March 15, 2006

Virtual Technologies, Ltd. announced this morning the commercial availability of its Virtual Shadow™ Route Following technology. This technology incorporates the company's revolutionary, patent pending, Virtual Shadow™ Route Following system to offer what no other company can – the ability to track anyone or anything, anywhere, anytime.

Virtual Shadow™ is a proprietary Route Following technology. Virtual Shadow™ Route Following uses precision micro sensors to determine state of motion, 3-dimensional positioning, acceleration, direction of travel, and time of day, independent of GPS or cellular/wireless data transmissions. It is the perfect compliment to GPS.

Virtual Shadow™ seamlessly takes over tracking and position determining functions when GPS signals are unavailable, unreliable, or degraded. With Virtual Shadow™, you can now monitor a person's or object's movement, anywhere, anytime, whether indoors or outdoors. Virtual Shadow™ technology uses miniature, self self-contained, sensors and software to provide position data relative to the point of the last accurate GPS data, fix or initialization point. Virtual Shadow™ is specifically engineered to augment GPS reception during times of signal degradation or signal outages.

Virtual Technologies, Ltd. is a Spokane, Washington based global telemetry, communications, remote control, and remote monitoring company, providing a cost-effective line of satellite and wireless solutions for tracking, monitoring, control and reporting of assets and personnel. Virtual Technologies, Ltd. is a privately owned corporation. Its web address is www.VirtualTechnologiesLtd.com.
